

Project Spotlight – S-Curve Report for P6

S-Curve reports are excellent instruments to convey the project's progress to upper management. It can also show deviations from the original plan, earned value against the original plan, added scope, and much more.

Dynamic has developed 100's of custom BI Publisher reports for Primavera P6 EPPM and Contract management users including custom S-Curve reports designed specifically to the users' requirements.

Below is an S-Curve report that was created at the end of the project for activities for Pre-Turnaround and Turnaround phases. The report shows:

- Total Base (Original) Labor Hours,
- Total Base + Growth (Added scope) Labor Hours
- Total Growth Labor Hours
- Achieved (Earned Value) Labor Hours for Original Activities and Growth Activities
- Achieved (as a percentage of the overall project) on a daily basis throughout the project

In addition, Dynamic can help you expand P6's capabilities. For example, one of our clients could not live with P6's Earned Value (EV) averaging process therefore Dynamic developed stored procedures to automatically calculate EV values and store the values into new tables (consequently, EV values never changed on previous days).

For another client, Dynamic developed a Web-Based Application to collect man hours by project, shift, and resource and store the data into new tables. Then BI Publisher reports were developed to extract data from both P6 and the new tables.

Each operation has its own reporting requirements and wants the data organized in a specific manner for management reports. Dynamic will help you design and develop custom reports and custom solutions to meet ALL of your reporting needs.
